

Trent Rivers Trust Project Officer

The Trent Rivers Trust (TRT) is requiring costs to deliver a number of new river restoration projects across the Trent Catchment. The projects are on tributaries of The Trent in Nottinghamshire and Leicestershire.

These projects we will require the following services:

- **Construction site supervision:** To oversee the on ground delivery of the project to specification, budget and time, adhering to all relevant environmental and safety requirements.
- **Small scheme design:** Using data provided and a site visit, prepare detailed drawings for small scale interventions, of standard suitable to apply for necessary consents and permissions.
- **Technical engagement:** to include landowner liaison and obtaining consents and permissions.

We would like to invite you to quote to support TRT to deliver this work and would therefore ask if you could provide your daily rate, itemising VAT if relevant, for the services listed above. All projects will be overseen by a Project Manager at TRT, and all sub-contractor work would be carried out with full liaison with TRT.

We anticipate the role taking between 16 and 20 full time weeks spread over an 18 month period. The timing of the projects is not yet fixed but it will start in 2019. TRT would provide 2 months notice of project start date.

Quotes and enquiries to office@trentriverstrust.org to be received by Monday 26th November 2018.
