Trent Rivers Trust Technical Specialist

The Trent Rivers Trust (TRT) is requiring costs to deliver a number of wetland/ water quality and de-culverting projects across the Trent Catchment. The projects are located on tributaries of the Trent in Leicestershire.

These projects will require the following services:

Providing the necessary technical input and facilitation with partners and external consultants to develop projects so that construction can proceed. Specifically to include;

- Influencing final design concepts.
- Stakeholder engagement strategy: liaison with planning authorities, developers, landowners and local communities.
- Interpreting and presenting data; topography, flood risk, water quality, ecological, archaeological etc.
- Obtaining consents and permissions for complex high risk works.

We would like to invite you to quote to support TRT to deliver this work and would therefore ask if you could provide your daily rate itemising VAT if relevant, for the services listed above. All projects will be overseen by a Project Manager at TRT, and all sub-contractor work would be carried out with full liaison with TRT.

We anticipate the role requiring between 6 to 8 full time working weeks spread over a 12 month period. The timing of the projects is not yet fixed but is likely to start in 2019. TRT would provide 2 months notice of project start date.

Quotes and enquiries to office@trentriverstrust.org to be received by Monday 26th November 2018.
